Query+

- Image Scaling
 - Image size is dependent on the height of the row and the width of the column containing the image
 - If the original image is *larger* than the allotted space, it will be scaled down to fit, maintaining its aspect ratio and centered in the space.
 - If the original image is *smaller* than the allotted space, its original size will be maintained and it will be centered.
 - Note:

Image scaling can cause performance degradation in a large query.

Query+

- Image Scaling
 - All images will be rendered using the same dimensions, derived from the row height and the width of the narrowest column to contain an image.
