# Query+ Enhancements

PxPlus 2019 (v16)

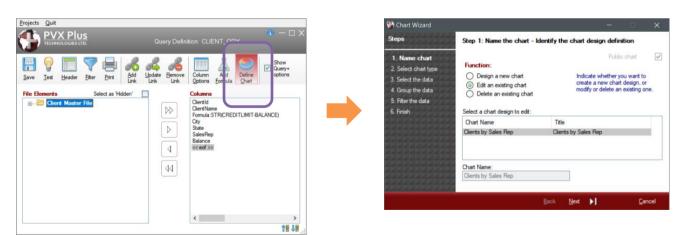

## Agenda

- New Features and Options
- Query Profiles
- Performance
- Query Web Service

### **NEW FEATURES AND OPTIONS**

### AutoChart Access

- Easier access to AutoChart Chart Wizard
  - Define Chart button added to Query Definition toolbar
    - Create public AutoChart definitions that can be used to generate and load data into a Smart Chart

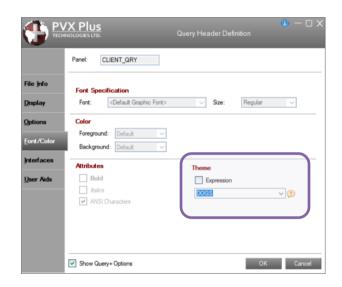

### Suppress Panel Persistence

- Suppress Panel Persistence on Queries
  - Query will appear where originally defined
  - Set %nomads'Query\_Suppress\_Persistence
    - Settings:
      - 0 =Do not suppress persistence
        - If persistence set by %nomads'Panel\_Info\_Prog\$="\*winpnl"
      - 1 = Suppress persistence
        - Location/size of query will be the original location/size
      - 2 = Suppress location persistence
        - Location will be original location, but size will persist if changed
  - Applicable to both Query+ and Classic queries

## Theme Support

- Specify a theme for the individual query on the Font/Color tab of the Query Header
- Hierarchy for the query theme is:
  - Query theme takes precedence
  - If no query theme, then the Panel Header theme is used
  - If no query or panel theme, then the Library Defaults theme takes effect
  - If none of the above, then the global theme (%nomads'Theme\$) is used
  - In all cases, %nomads'ThemeOverride\$
    will override all theme settings

# **Query+ Options**

- Suppress Column Header buttons on a Drop Query
  - Make the Drop Query resemble a Drop Box more
  - Deploy globally:
    - Set %nomads'Query NoDropHeader=1
  - For a specific query:
    - Set No Drop Query Header option in the Query Header on the Options tab

- Options are:
  - Default uses the setting in %nomads'Query NoDropHeader
  - Always
  - Never

# **Query+ Options**

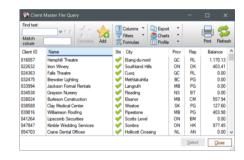

#### Auto Column Resize

 Automatically adjusts the sizes of the columns to fit the width of the query

Auto Column Resize:

Always

- Deploy globally:
  - Set %nomads'Query AutoColSize=1
- For a specific query:
  - Set Auto Column Resize option in the Query Header
  - Options are:
    - Default uses the setting in %nomads'Query\_AutoColSize
    - Always
    - Never

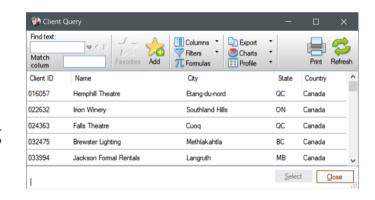

# **Query+ Options**

#### Center Text Vertically

- Centers text vertically in the row when the row is greater than one line high
  - Text that exceeds the width of the column is truncated and displayed with an ellipsis (...)
- Default Align text to top of row with word-wrap
- When an image is used in the query, the setting is ignored and all text is centered vertically
- The Center Text Vertically option has been added to the Display tab of the Query Header Definition

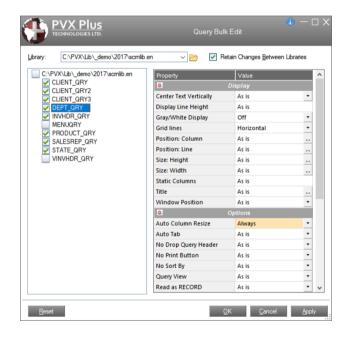

## Reorganized Header Definition

- Reorganized the layout of the Options tab
  - Separated Query+ options from Classic Query options
  - Reworked the enabling/disabling of options on the Options tab based on Classic vs Query+
  - Moved the Gray/White Display option from Options to Display tab
  - Removed the redundant Database Connect
     Option from Options tab

## Query Bulk Edit Utility

- Updated with the latest options
- An easy way to apply new options to multiple queries in a panel library
- Accessed from:
  - Library Object Selection Utilities menu
  - IDE Graphical Application Builder (Nomads) Utilities menu

### **QUERY PROFILES**

### Definition

### **Query Profiles**

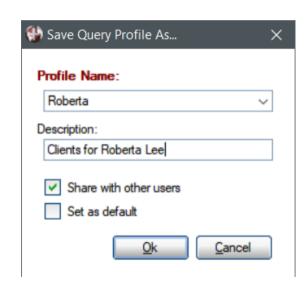

- A Query Profile is a collection of run-time settings that has been applied to a
  query by an end user
- Settings consist of:
  - Column settings
    - Order
    - Width
    - Hide/Show
  - Column filters
  - User-defined formulas

• Settings can be saved with a name and recalled at a later time

# Saving Query Profiles

- Save / Save As options available in Profile group of the query popup menu or Profile button
- Profile names must be unique to the particular query and user
- Each user can create up to 10 profiles per query
- Share your profiles with others

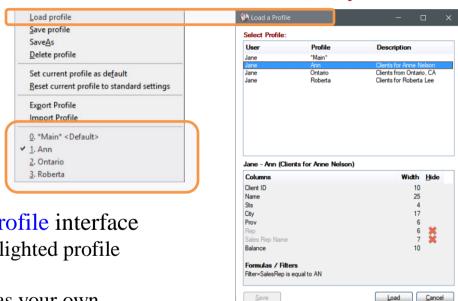

# Saving Query Profiles

- What is saved and when...
  - Column and filter information is saved automatically if the Save Column Settings and Save Filters items in the Column and Filters menus are checked
    - If checked, settings are saved when leaving the profile
    - If not checked, you must Save from the Profile menu
  - User formulas are saved when created and edited
  - Settings can be inherited by saving an existing profile with a new name

## Recalling Query Profiles

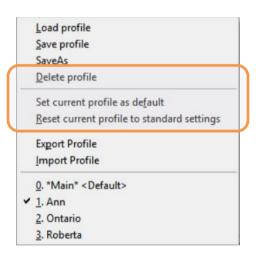

- Two ways to load a profile:
  - Load an existing profile from the profile list at the bottom of the Profile menu

- Recall a profile from the Load a Profile interface
  - Displays the contents of the highlighted profile
  - Also displays shareable profiles
    - Can be selected and saved as your own

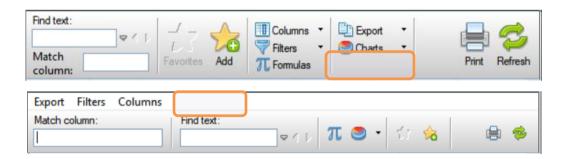

## Other Functionality

- Delete
  - Delete the specified profile
- Set the current profile as default
  - The default profile is used when the query is invoked
- Reset current profile to standard settings
  - Restore the settings to those of the original query definition

## Suppressing Profiles

- Exclude the Profile menu group from the query popup menu and toolbar
  - Add "P" to the value of the %nomads' Query Suppress Popup\$
  - Example
    - %nomads'Query\_Suppress\_Popup\$="PGU"
       Would suppress Profile, Graphs/Charts and User Formulas on the menu and toolbar

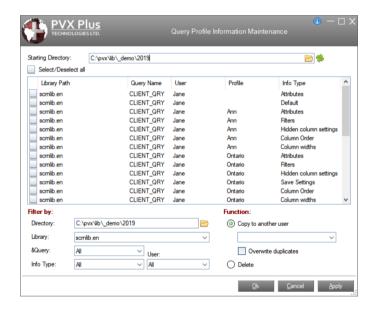

### Profile Maintenance Utilities

### **Query Profiles**

- Updated to handle named profiles
  - Includes:
    - Export/Import options on Profile menu

Export Profile Import Profile

 Query Profile Information Maintenance utility on NOMADS and Library Object Selection Utilities menus

### Respect the End-User Data

**Query Profiles** 

- query.inf file
  - Profile data is stored in query.inf files in the directory where the screen library is located

#### Warning:

These files contain data created by the end user, so be careful **not** to include these files in your application installs, or you will overwrite the user's data.

### **PERFORMANCE**

### Performance Enhancements

#### Performance

- Background Loading for Filtered Data
  - Implemented LoadPoint logic to load blocks of records into the query
    - Used to load one record at a time
- Load-On-Demand for Unfiltered Data
  - When Start Value specified, implemented use of RNO() function for starting record to position the load
    - Previously Background Load mode was used when Start Value was given

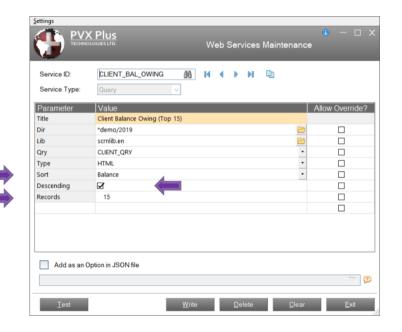

### **QUERY WEB SERVICE**

### Query Web Service Enhancements

#### Query Web Service

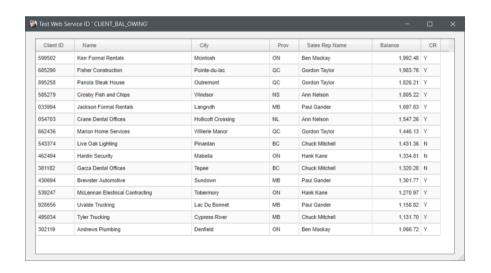

- Query Web Service Parameters
  - New parameters to allow for more targeted results
    - Sort
      - Column to initially sort on
    - Descending
      - Specify initial sort sequence
      - Number of records to return

## Query Web Service Enhancements

Query Web Service

- Example
  - Top 15 Customers with highest A/R Balances displayed in descending sequence
