How to Set Up PxPlus Extension in Visual Studio Code

If you plan to work with text-based PxPlus programs, then you must also specify which file extensions Visual Studio Code should consider a text-based PxPlus program:

- Under **Text Program File Extensions**, add a file extension to the list by clicking the **Add Item** button, then enter a *.xxx* file extension and then click OK
- To add more than one file extension, repeat this step as many times as needed
- By default, the only extension on the list is .pxprg

• The remaining settings are optional and

- Control the number of errors reported before it stops reporting new errors
- Control how the program is displayed/saved
 - These settings are the same for all PxPlus program editors

- Any PxPlus programs or text-based PxPlus programs that are opened via this workspace will be recognized as a PxPlus program by Visual Studio Code
- This enables all the features and allows PxPlus programs to be edited

- Syntax errors are identified with a wavy line, and the number or errors are displayed beside the program name
- Hovering over the error displays a dialog that provides additional details about the error
